SkyView Notes:

1. Display prices include world-wide terrain data
2. SkyView autopilot software is included with every system
3. Selecting SkyView Network Cables: a cable is typically required between two Displays, between a Display and an ADAHRS Module, and between a Display and an EMS Module. Cables listed with the descriptor "1 end with pins only" are shipped with the second connector, which can be fitted to the pins once cable routing is complete.
4. Existing Dynon engine monitor sensors and harness will work with the SV-EMS-220 Engine Module. Existing Dynon Servos and pitot probes will also work with the SkyView system.
5. Very bright, high-resolution screens are fully dimmable for night flight.
6. USB connectible for program and data updates.
